 About	6
 Exit	7

Weather Page

This page is displayed when the user opens the mobile application. It has Information about weather from the current location of the phone initially and changes accordingly when user enters different city

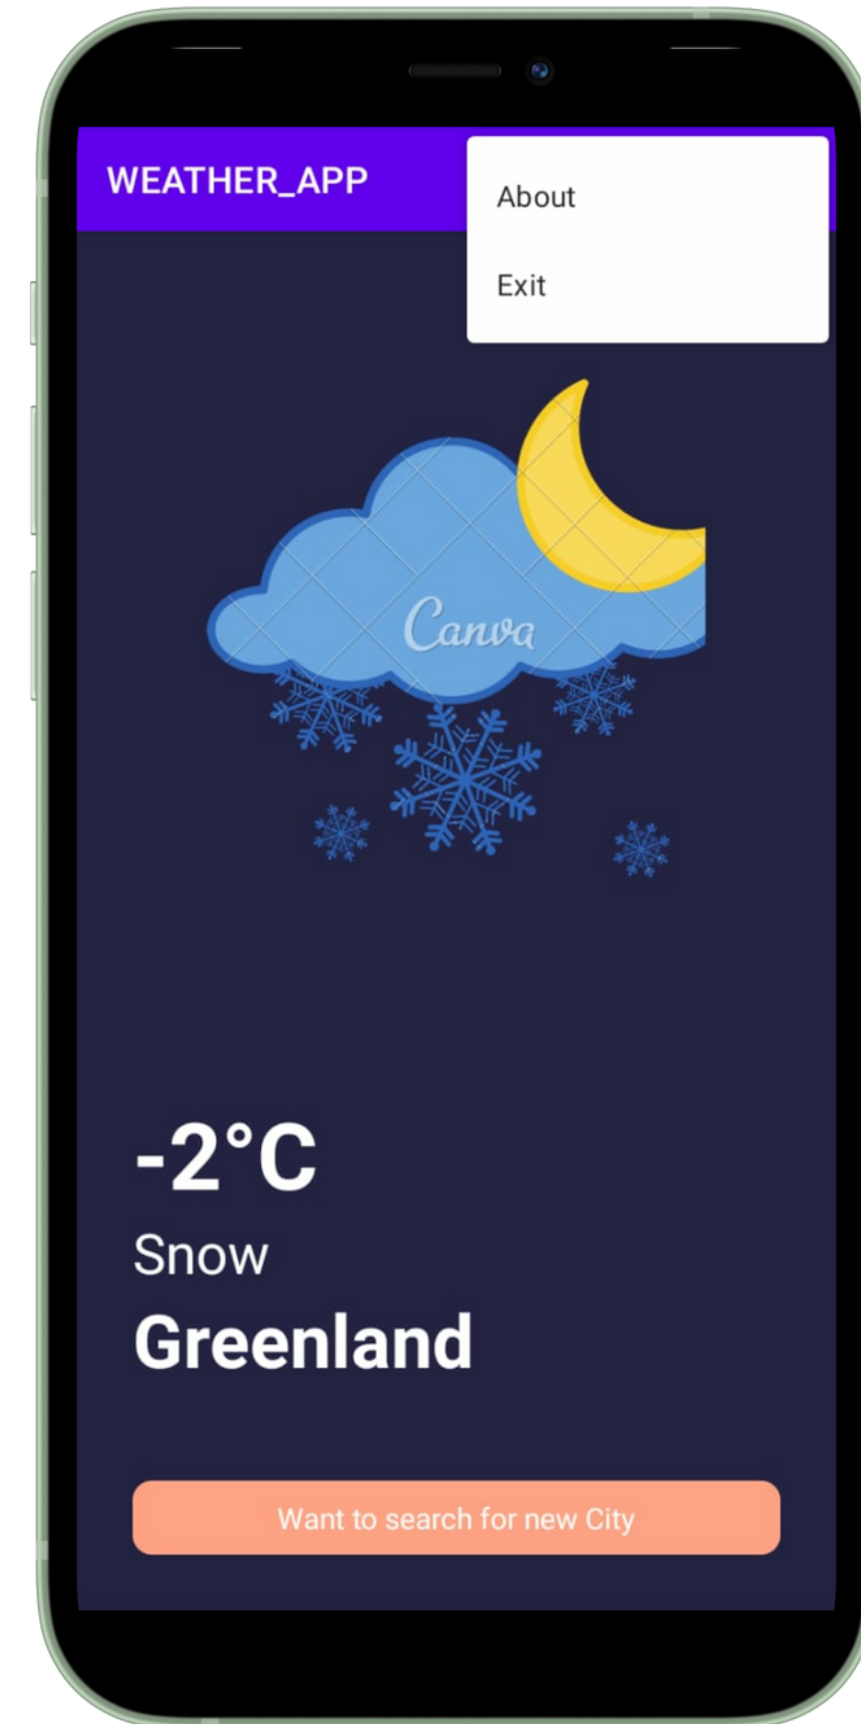

Insert City Page

When we press the button at the bottom of the weather page, the app moves to a different page where the user can insert the city name of his/her choice and can move back to the initial page by pressing the back button at top.

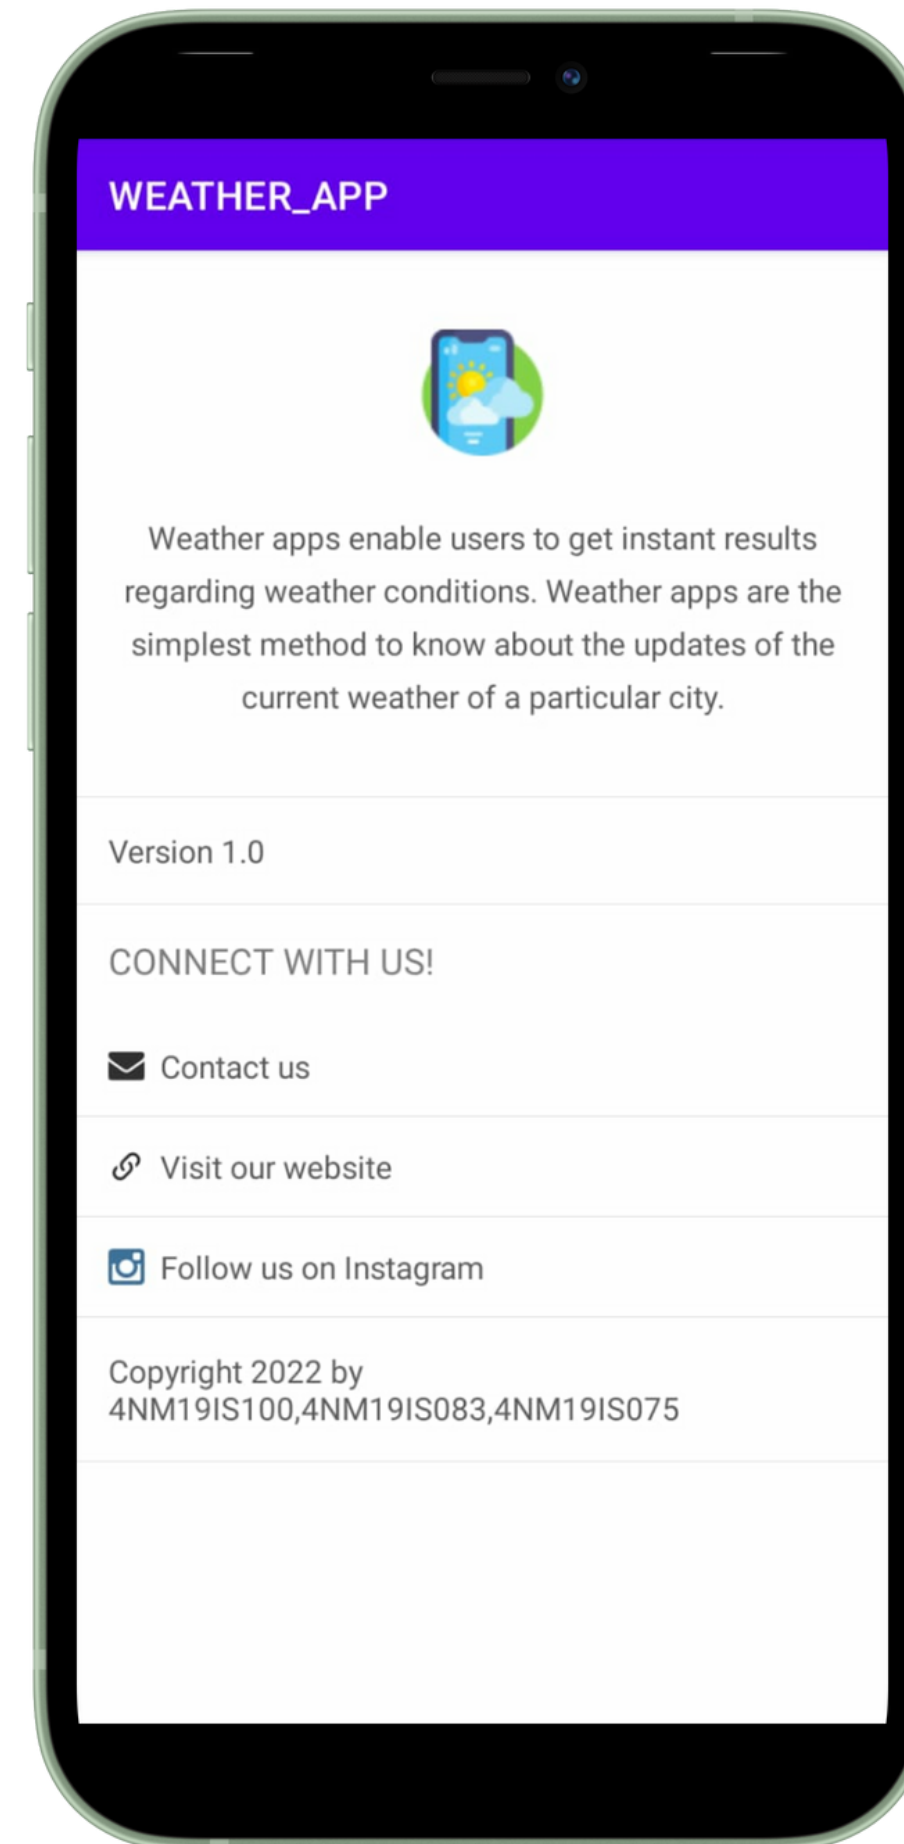

Option Menu

On the Weather page or the Landing page, Options Menu is made available. It has two options, About and Exit.

About Page

On Pressing the About option, a new page is displayed. This page provides the user with information about the application, which includes the purpose of developing the application, The developer contact email, The GitHub link of the developer, and lastly the Social media handle of the developer

Exit

When the user clicks on the Exit option, an Alert Dialog box appears. It asks if the user is sure about exiting the app. If the YES button is pressed, he will be exited from the application. If the NO button is pressed, he will be redirected back to the application.
